

ROTOR

ROTOR PUMP
SELECTION GUIDE

Applications

Food Industry: milk, yoghurt, butter, ice-cream, chocolate, jelly, jam, syrup, beer, soft drinks, fruit juice, pudding, tomato sauce, sesame, peanut butter, condiment, edible oil, cheese blocks, whey, wort, yeast, etc.

Daily Chemicals: face cream, shampoo, detergent, hand sanitizer, skin gel, detergent, cosmetics, skin cream, toothpaste, hair dye, soap, shoe polish, glycerol, fatty alcohol, hair gel, etc.

Chemical Industry: gasoline, diesel, kerosene, crude oil, sludge, asphalt, paint, pigment, dyes, coating material, catalyzer, leather, fat, solvents, resins, silicone oil, adhesives, latex, colloidal material, and other colloidal subst, etc.

Pharmacy Industry: health care products, pharmaceutical, vaccine, biological products, syrup, slurry, protein, royal jelly, extracts, emulsions, pills slurry, fish meal, pollen, etc.

Environmental Protection: mud, manure, fertilizer solution, sewage, sludge, toxic agents, etc.

Construction Industry: paints, coatings, resins, organic solvents, indoor/outdoor wall coating, water proof coating, ceramic coating, paint coating, ceramic glazing, etc.

Other: nano-materials, papermaking, textile, plastic, biochemical, coal industry, etc.

Typical rotors and application features

Three-lobe rotor pump

Especially suitable for the mediums that are easy to foaming or may be damaged during high-speed transportation. Output materials has been steadily delivered and its components will not be destroyed.

Butterfly rotor pump

With butterfly rotor, it is superior to other rotor pump when transferring material with high viscosity and large powder and effectively transports extremely stiff material. Output material has been steadily delivered and its components will not be destroyed.

Single lobe rotor pump

This pump is especially for material with large particles.

Drive Configuration

Motor+stepless speed reducer

The main characteristics: High speed-regulating precision, large speed-changing range (The speed ratio ranges from 200 to 1000 freely). Continuous in running, smooth in driving, stable in performance and low in noise, this is reliable and infinitive flow adjustment. But it changes the speed by manual adjustment, low degree of automation, and speed-regulation should be effected in running. Do not turn the hand wheel of speed-regulation when the machine stops. The stepless speed reducer is not used in such an occasion where overload or running-blockage is easy to occur.

Motor+one grade stepless speed reducer

The main characteristics: Compared with ordinary stepless speed reducer, it has lower speed (40-400rpm). With the same power, it has higher torque. And it runs more smoothly and steadily with lower noise, its disadvantages are same as ordinary stepless speed reducer.

Motor +one-grade gear reducer

The main characteristics: Strong bearing capacity, specifically for the delivery of materials with high viscosity and thickness. If the inverter motor adopted, the inverter can be configured, in order to achieve the automatic adjustment of the flow.

Motor+two-grade gear reducer

The main characteristic: Same as one-grade gear reducer, but has lower speed and higher torque.

PLC+VFD Control

Main features: Controlled by PLC or VFD, the medium can be feeded quantitatively, regularly and constant pressure. PLC is a kind of automatic control. It can be acted as high-precision metering pump.

Option

V shape inlet

Vertical inlet and outlet

Heat jacket

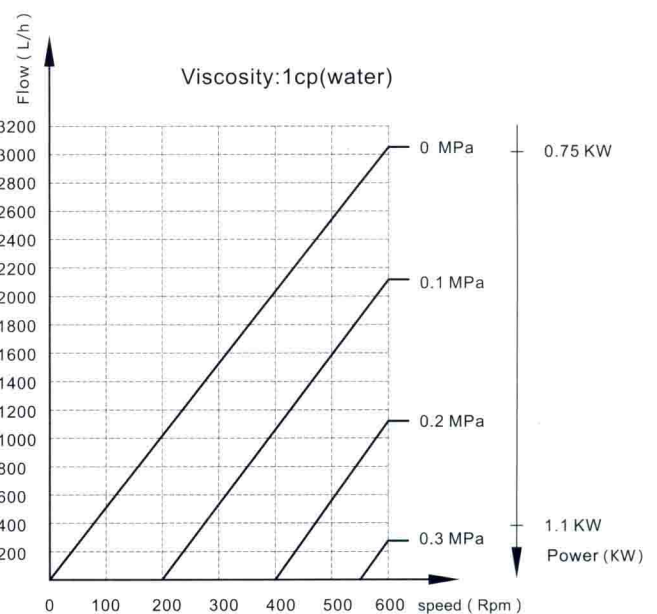

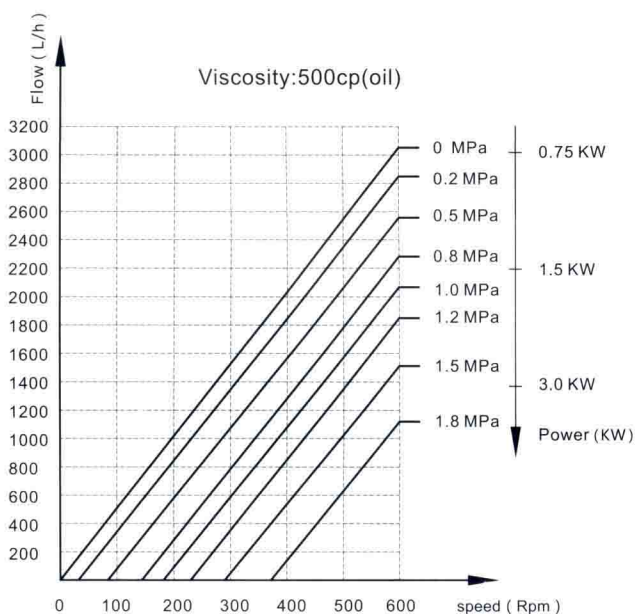

Movable

Main Parameter

Model	Capacity L/R	Flow m ³ /h	Speed rpm	Max Pressure Mpa	Viscosity cp	Power kw	Connection Hoop Flange
RP1	0.05	0~1	40~700	1.0	1~500000	0.25~1.5	1" DN20
RP2	0.1	0.2~2	40~700	1.2	1~500000	0.55~2.2	1.25" DN25
RP3	0.17	0.4~3	40~500	1.2	1~1000000	0.75~3.0	1.5" DN32
RP5	0.26	0.6~5	40~500	1.5	1~1000000	1.5~5.5	2" DN40
RP8	0.46	1~8	40~450	1.5	1~1000000	2.2~11	2.5" DN50
RP12	0.70	1.6~12	40~450	1.5	1~1000000	3.0~15	2.5" DN50 or DN65
RP20	1.20	2.8~20	40~400	1.5	1~1000000	4.0~18.5	3" DN65 or DN80
RP35	2.10	5~35	40~400	1.5	1~1000000	7.5~30	4" DN100
RP55	4.20	10~55	40~350	1.5	1~1000000	11~45	DN125
RP80	6.70	16~80	40~350	1.5	1~1000000	15~75	DN125 or DN150
RP120	11.0	26~120	40~300	1.5	1~1000000	22~90	DN150

- 1.The value for L/R in the table is tested by water;
- 2.The higher viscosity of the liquid, the lower speed should be;
- 3.Flow is proportional to the speed, and inversely proportional to the pressure;
- 4.Max pressure means the max pressure pump can produce; the max pressure may be different for different liquids;

Performance curve

Note: The above curves are for model RP2

Pump Head Drawing

Note:
Main driving shaft position: The height of the main driving shaft is at H3 if the driving is ordinary stepless speed variator, frequency conversion motor or two-grade gear reducer. The height of the main driving shaft is at H4 if the driving is one grade gear reducer or one grade stepless speed variator.
